

Discover Advanced Osteopathy

The Path Of The Master Clinician

Discover advanced techniques used by Andrew Taylor Still,MD, Dr. Sutherland, and Dr. Fulford to evaluate and treat the biogenic fields within the human body. We will explore the Osteopathic Lesion, tracking the lesion to the key lesion, and ways to work with the Osteopathic lesion on the treatment table. Of course, in Dr Still's day as today it was not always possible to be physically present in the room.

As we discussed in the previous lecture there were clear instances where Dr Still treated from afar. We will discuss possibilities for healing and virtual consultation and treatment for our patients distantly. Using skills of Osteopathic listening and perception we can learn to provide Osteopathic Consultation virtually. This opens up a

multitude of possibilities when we add the integrative techniques of Eastern Medicine, Mind-Body Techniques, Osteopathic Nutrition, Osteopathic Reflex Work, Osteopathic Homeopathy, and Emotional Release Techniques it greatly expands the possibilities.

The Master Clinician , as is done by Dr. Centers and a growing number of expert Osteopaths, can consult with patients from across the world. Virtual Consultation will be one of the focuses of the Master Clinician Program. Lastly, we will give an overview of the Master Clinician program and give participants the opportunity to join in on this great adventure.

Come join us on the Path to The Master Clinician ...Learn...

Advanced Osteopathic Techniques Directed at Deep Constitutional Healing

Persistent Primitive Reflexes as A Cause of Persistent Osteopathic Lesions

A persistent problem seen in patients with long standing Osteopathic lesions is that primitive neurological reflexes may not integrate during the typical developmental stages which are documented in the literature. Unintegrated reflexes can interfere with many aspects of learning, physical movement, development, and behavior. Integrating a reflex connects nerve nets or repairs them to allow rapid and efficient transmission of impulses along nerve cells. Individuals long term Osteopathic Lesions such as autism, ADD/ADHD, brain injuries, cerebral palsy, T-21/Down syndrome, dementia, learning disabilities, strokes, and pain are finding a reduction of symptoms when we address these reflexes.

Addressing the Gut-Brain Axis

This nervous system is located inside the wall of the GI tract, extending from the esophagus to the rectum. Technically, it is known as the enteric nervous system, or ENS, but it has been given other labels, too: “second brain. Its treatment was first mentioned in the early Osteopathic literature. Disruption of this axis has been associated with Pain, Anxiety, Depression, Multiple Sclerosis, Autism and many other conditions. We will study the role of osteopathy in restoring the well-functioning of the disrupted physiological system due to toxic exposure and its influence on the gut-brain axis. We will learn therapeutic manual techniques that may be used to assess and reduce the effects of toxic overload in the gastrointestinal system. We will address ways integrated Osteopathy can assist and resolution and balancing of this important axis.

Advanced Techniques of The Fluid Body

We will continue discussion of the fluid body, the endocardium and the enormous potential of the central nervous system fluid- the involving the highest known-element. We will begin to explore various pathways of motion in the body including fascia, fluid, and energetic levels. The practitioner will learn techniques to address each of these areas. Fluid techniques will be learned to locate body positions that are most beneficial in releasing long held dysfunction.

- Advanced Integrative Medicine**
- Neurological Reflex Integration**
- Osteopathy approach to Traditional Chinese Medicine**
- Osteopathic approach to Ayurvedic Medicine**
- Advanced Treatment Techniques for the Central Nervous System**
- Dietary Intervention, Herbal Therapy, Essential Oil Medicine and Basic Principles of Homeopathic Medicines.**
- Biomedical and Nutritional Approaches**
- Advanced Psycholinguistic and Emotional Release Techniques to Resolve underlying psychological blocks from healing**

- **This 24 month course will culminate in two comprehensive 5 day intensives designed to greatly expand the practitioner's skill set.... They will take place in Sedona, Arizona a place visited by members of the Still family and known for its special electromagnetic energy fields called vortexes. These intensive sessions will integrate all that we have learned transforming the basic practitioner into a Master Clinician who can practice anywhere in the world virtually or in person.**

**Virtually March 28, 2021 introductory Lecture
and Course Overview.**

Why take this course?

This course will never be offered again.

Because of COVID Dr Centers graciously agreed to create this program to advance Osteopathy in Canada

Dr. Centers has over 30 years of experience in the field of Osteopathy and Integrative Medicine Medicine.

He was the last Physician to work alongside Dr Viola Frymann and was her Clinic Director for over 15 years

He is a board certified clinician with dozens of years working with the most challenging cases

Will learn methods to assess patients virtually and continue

Sponsored by AutismOne one of the largest integrative medical educators in the US

He will share knowledge and techniques that you will get nowhere else.

You will be provided copies of all course lecture slides as well as recordings of presentations.

Will be able say you studied personally under Dr Centers.

Dr Centers was a direct student of Viola M Frymann who was in turn a direct student of William G Sutherland who in turn was a direct student of Andrew Taylor Still, MD.

Master Clinician Certification will designate you as a leader in your profession

Once in a lifetime opportunity to study with a master in Sedona
